If the application won't open, try this - uninstall Diagrammer, then install any Windows Updates onto your computer, then reinstall Diagrammer.

PS! Does not support editor tracking!! If you import a datamodel/xml with editor tracking enabled on certain fields diagrammer "removes" the editor tracking. More importantly is that you can't enable ET on these fields again after publishing to xml and importing to gdb, if the fields had ET on them during import to digarammer!!!
