Contents

Acknowledgments ix
Using this book x

Chapter 1: Understanding ArcGIS products and extensions 1
  ArcGIS products 2
  ArcGIS for Desktop extensions 6

Chapter 2: Working with geographic data storage formats 15
  Data formats 16

Chapter 3: Using the geodatabase 27
  Types of geodatabases 28
  Defining geodatabase tables 34
  Advanced geodatabase elements 37

Chapter 4: Managing geographic data 43
  Methods for adding data to the geodatabase 44
  Creating data from layers 55
  Layer source data 60

Chapter 5: Coordinate systems 67
  Types of coordinate systems 68
  Projection on the fly 73
  Data in different projected coordinate systems 75
  Data with an unknown coordinate system 77
  Managing data in different geographic coordinate systems 79

Chapter 6: Evaluating data 87
  Evaluating data for a task 88
  Data documentation 92

Chapter 7: Associating tables 101
  Types of table relationships 102
  Table associations 104
  Relationship classes 109
Chapter 8: Georeferencing and spatial adjustment  117
  Georeferencing  118
  Spatial adjustment  126

Chapter 9: Geocoding  133
  Geocoding components  134
  Address matching  139
  The geocoding environment  142
  Geocoding results  146

Chapter 10: Creating feature geometry  149
  Feature templates  150
  Feature construction tools  152
  Segment construction methods  155
  Creating features from existing features  159

Chapter 11: Updating feature geometries  165
  Modifying feature shape  166
  Dividing features into parts  172

Chapter 12: Editing attributes  179
  Attribute editing methods  180
  Field calculations  183

Chapter 13: Maintaining attribute integrity  191
  Attribute editing with default values  192
  Attribute editing with domains  194

Chapter 14: Editing with topology  201
  Topology  202
  Geodatabase topology  208

Chapter 15: Geoprocessing for analysis  223
  Geoprocessing tools for analysis  224
  Geoprocessing models for analysis  230
  Using Python scripts for analysis  235
Chapter 16: Analyzing and querying tables  241
   Extracting information from attribute tables  242
   Attribute queries  246
   Spatial queries  248
   Queries in analysis  250
   Working with selections  252

Chapter 17: Performing spatial analysis  257
   Proximity analysis  258
   Overlay analysis  262
   Statistical analysis  266
   Temporal analysis  268

Chapter 18: Organizing layers  273
   Working with layers and data frames  274

Chapter 19: Displaying layers  283
   Vector layer symbology  284
   Raster layer symbology  288
   Managing the amount of data viewed in a map  290

Chapter 20: Composing map layouts and graphs  297
   Map layout  298
   Graphs  303

Chapter 21: Creating Data Driven Pages  309
   The index layer  310
   Enabling Data Driven Pages  311
   Refining Data Driven Pages  314

Chapter 22: Creating map text and symbols  319
   Map text  320
   Custom symbols  329

Chapter 23: Preparing maps for publishing  335
   Optimizing maps for the web  336
   Sharing a map as a service  337
   Preparing temporal data for a web map  342
Chapter 24: Sharing maps and data  345
  Exporting and printing maps  346
  Printing maps  349
  Sharing maps and data through packaging  353
  Sharing map documents  357

Image and data credits  363
Installing the data and software  373
Data license agreement  379
